

Stacia Servos-Mejia

Stacia Servos-Mejia is the Science and Program Coordinator here at KidsQuest.

Originally from Texas, Stacia has a Master of Science in Geophysics and spent seven years in the oil and gas industry. During this time, she was always willing to share her rock collection with classrooms as she hoped to peak student's interest in science.

She and her husband left Texas to pursue other career interests and lived in Omaha, Nebraska for 3 years before moving to the Northwest. Stacia discovered the joy of working full-time with children while living in Nebraska as the Science and Education Coordinator at Omaha Children's Museum.

Since arriving at KidsQuest's in the Summer of 2007, Stacia has developed, organized and run a number of science-based programs, including summer camps, 'open-labs', fieldtrips, workshops and homeschool lab series.

She is passionate about engaging children in science and math at an early age and looks forward to a great year of science discoveries!
